The Administration Report of the Archaeological Department for the year 1112 M. E. (1936-37 A. D.) forwarded by the Director with his letter No. 73/38, dated the 20th February 1938.

ORDER D. DIS. No. 375 OF 38/EDN., DATED TRIVANDRUM, 16TH MARCH 1938.

### RECORDED.

- 2. Twelve inscriptions hitherto not brought to light were collected from South Travancore and deciphered by the Department during the year under review. Six images in stone representing the figures of Visnu, Subrahmanya, Ganesa, Naga &c., were discovered in the Tiruvitankodu temple in South Travancore. The wood-carving in 45 panels all round the four walls of the Ramasvāmi temple at Padmanābhapuram belonging to the 18th Century A. D. in the reign of Raja Marttanda Varma, the maker of Modern Travancore, and depicting the entire story of Ramayana, was examined in detail. They are exquisite works of art, illustrative of the excellence of the ancient artistic traditions of the State. Two mural paintings one on the walls of the Tirnvambadi shrine in the Sri Padmanabhasvami temple, Trivandrum, belonging to the 14th century A. D. and depicting a music party of women &c., and the other in the Krenapuram Palace in Central Travaucore, belonging to the 18th century A. D. and representing the Puranic story of Gajendra Moksa, were also found out during the year.
- 3. Some monuments of the neolithic age in the Thengakkal Estate near Vandiperiyar on the High Ranges were excavated. They were found to be cairns containing underground cists made of granite slabs, or prehistoric burial chambers. Some of the cists contained burial urns and others were empty. Trial diggings at Vellimalai near Eraniel brought to light 20 sepulchral urns of which two were unearthed. One of them contained two axes. These relics are supposed to belong to the iron age.
- 4. A Regulation for the preservation of aucient monuments and objects of archæological, historical, and artistic interest was passed during the year. Besides the usual maintenance of the

historical monuments such as forts, palaces, tombs &c. special attention was paid to the conservation of the Padmanabhapuram Palace by carrying out the necessary repairs and copying the murals therein.

OFFICE OF THE DIRECTOR OF ARCHAEOLOGY, TRIVANDRUM, DATED 15TH FEBRUARY, 1938.

From

R. Vasudeva Poduval Esq., B. A., Director of Archæology, Trivandrum.

To

The Chief Secretary to Government, Trivaudrum.

Sir,

I have the honour to submit herewith the Administration Report of the Department of Archaeology in Travancore for the year ending the 32nd Karkatakam 1112 M. E. (1936-37).

#### General.

Mr. K. Sivaramakrishna Sastri, the Pandit Assistant of the Department, was appointed in the year as Chief Pan. dit in connection with the work of cataloguing the manuscripts of H. H. The Maharaja's Palace Granthappura, and those of the Office of the Curator for the publication of oriental manuscripts (vide G. O. R. O. C. No. 1828/36/Edn., dated 17th April 1937). He was relieved on the afternoon of 18-9-1112 and directed to report himself for duty to the Curator for the Publication of Oriental Manuscripts. In his place, Government were pleased to appoint Vidvan V. R. Paramesvaran Pillai, Malayalam Pandit of the Scott Christian High School, Nagercoil (vide G. O. D Dis. No. 802 of 37/Edn., dated 12th June 1937) and he took charge on the forenoon of 3-11-1112.

Mr. V. Padmanabha Pillai, Artist Draftsman, availed himself of privilege leave for four months with effect from 1-4-1112, and in continuation sick leave for the rest of the year. Mr. M. Subrahmanya Pillai was appointed to act in the vacancy (vide G. O. D. Dis. No. 1726/36/Edu., dated 5th December 1936).

Mr. D. Srinivasan Potti, the Photographer of the Department, proceeded on combined privilege and sick leave for four months with effect from 3-3-1112. Mr. M. Ramankutti Nair was

appointed to act in his place.

Tours.

I spent 75 days in camp and the Pandit Assistant 25. The places visited by us are given in Appendix B. In the course of our explorations during the year, twelve new lithic records and

some important works of ancient art, not hitherto brought to light, were discovered. The inscriptions were copied and deciphered. An attempt was also made towards the examination of the relics of ancient art mentioned above and their identification and study. The work of the year is indicated at some length in the following pages.

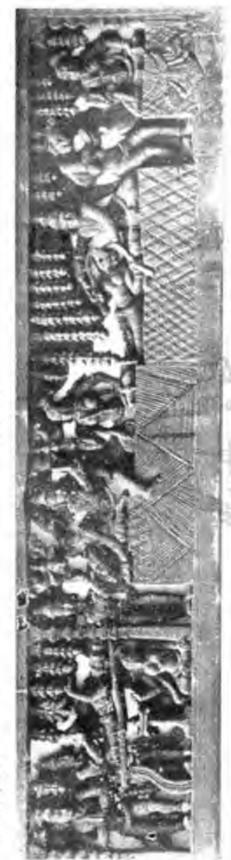

Epigraphy.

Twelve new inscriptions were collected and deciphered in the year ander review. The first four were discovered in Agastisvaram, a village near Cap: Comorin, famous for the Agastyalinga shrins, believed to have been consecrated by the sage Agastya. In the Kollam year 614 (i. e. A. D. 1439) the village was first colonised under commands of the then ruling King of Travancore, who set apart lands for men of different castes and profassions. But at present we find only traces of the original occupation. It is believed that the people of AgastIsvaram migrated subsequently to Kariyamanikkapuram, a village near Idalakkudi, and other places. The inscription copied from a slab set up in the salt pans at Variyar, near Cape Comorin, states that the salt pans were given to the God of Agastisvaram for the merit of King Kulottunga Coladeva. The present temple contains two shrines, the northern dedicated to Agastyalingamahadeva, and the southern The Visnu temple has no inscriptions, and judged to Visnu. from its architecture, seems to be a later construction. Of the inscriptions in the Agastyalingamahadeva temple, one is engraved on the west base of the central shrine. It begins with "Tirumadantaiyum Jayamadantaiyum" and belongs to the second year of Tribhuvana Cakravartikal Srī Vallabhadēva. It refers to Munnurruvamangalam, and mentious the officers of the king. second one runs with the first and is dated in the fourth year of the It begins from the middle of the sixth line, and states that while the king was seated in Alakiya Pandyarsjan Madattu Pallikkettu in Tiruppavanam, near Rajasingakkulam, provision was made for the feeding of fifty persons returning after snana (i. e. bath), in Kanyatīrtha.

The north base of the central shrine contains the third inscription, which is fragmentary and mentions one Sivindiravasi who made a contribution to the temple on the day of Tiruvonam in the month of Adi.

The south base of the central shrine contains the fourth inscription copied in the year. A portion of it has been covered by a flight of steps now not in use. However, on my requisition, the steps were removed, and an estampage of the record was taken. The inscription belongs to the third year (2 plus 1) of SrI Vallabha-

KAINEYI SANTBANA.

dava (11th century A. D.?), and refers to the grant of a village to the temple. The inscriptions now found in the Agastiávaram temple do not read continuously, as the stones on which they are incised were rearranged carelessly in the course of its renovation.

The next six inscriptions were copied from the Kalkulam Taluk. Of these, No. 5 is dated in Kollam 435 (i. e. A. D. 1260) and relates to a gift of money for a perpetual lamp by Perran Mallan to be burnt in the Cera Cola Pandya Mahadeva temple at Alar in Kalkulam taluk. The sixth one, dated in Kollam 1062 (i e. A. D. 1887) refers to the Astabamlha coremony in the same temple. The seventh inscription is dated in Kollam 931 i. c. A. D. 1756), and refers to a wayside charitable institution given by a private person. The eighth record was copied from the Mahadeva temple at Kattimankodu. It is dated in Kollam 849, Saka 1775\* (i. e. A. D. 1674) and states that Kanakku Udayan Iccaran, belonging to the Dairaputra caste, gave some lands for Uccapaja in the same temple. The ninth record is in Vattelutta script, and registers the gift of a pillar by one Adiccan Narayanan. The tenth inscription was copied from the four sides of a pillar set up in front of the Alisadi Vinayagar temple at Sekkaravilai, Alar in Kalkulam Taluk. The temple belongs to the Harn community and the record in it is dated in Kollam 990 (i. e A. D. 1815) and refers to a Dharmadana deed for Uccapinga and offerings by Iccan Piccan and Ananci Maya Lakimi.

The next record was obtained from the Adimala Vinavaka temple at Olukanasseri, and is dated in Kollam 682 Ani 15 (i. c. A. D. 1507). It states that under the command of Matta Tiruvadi of Chiravai, Nadalvarmar residing in Idainada, lying between Parali and Tovala, and also both the mountains, were exempted from the taxes padai panam, talai panam, pata varam, anai variete. "Anjinanpuka idam" (protector of the oppressed), a title borne by a Travancore king, is also seen in this inscription. It is worthy of note in this connection that there was a street at Quilon with that name and that the king who ruled in Kollam 701, also bore the

same title.

The last of the inscriptions was copied from the western wall of the Cempakaraman Mandapa in the Suchindram temple, and is dated Kollam 722 Adi 14 (i. e. A. D. 1547). It registers a gift of land at Manakkudi and Tamarakkulam for conducting the service of Cempakaraman sandhi in the same temple.

## Ancient works of Art.

In the course of the explorations in the year, six images in stone were discovered at Tiruvitānködu, reported to have been

<sup>.</sup> The correct Saka date is 1596.

originally unsurthed from the temple tank. Of these one is a figure of Visau measuring about 3 ft. in height and is damaged by the makuta and the face being broken from the body. The second is one of Subrahmanya leaning on a peacock, and measures 2' 4" from head to foot. Its upper left hand is in Varada makes (pose) and the lower right hand in Sacihasta, while the other arms are broken. The third and fourth images were broken and without heads. The fifth one is of Ganesa, and the sixth of a Naga measuring 1' 1", with the image of Krana sheltered by its five hoods. These sculptures belong roughly to the fifteenth century A. D. They are conventional in shape; but their drapery is exquisitely wrought. The figures, though damaged, are graceful and noble in form.

In my report for 1104 M. E. reference was made to the existence of precious specimens of wood carving at the Ramasvami temple, Padmınā bhapuram. A detailed examination of this was undertaken in the year under report, and a considerable portion of my time was occupied in this work. Beautiful wood carving in 45 panels depicting the entire story of the Ramayana, is found all round the four walls of the temple just above the "vilakkumādam" and below the ceiling, forming decorative ornamentations of the caves which come sloping down and hiding the carvings from the sight of the ordinary visitor. The impression one gets is that of a prodigious and vital panoramy of Puranic figures chiselled with simple nobility and power and throbbing with delicate and eluding spiritual subtleties. There is a resilient splendour about the carved figures. Their heads are beautifully wrought, and their faces express a sweetness and serenity characteristic of humanity in the double sense of the humane and human, bearing the impress of an impatuous genius of workmanship. The following are the most important scenes represented in the panels:-

 The Goddess Earth in the shape of a cow complaining to Siva and all the Devas proceeding to Vaikunta.

Beginnings of Putrakāmēsti yāga.

 Birth of Rama, Laksmann, etc., and their first initiation in archery.

Tāṭakāvadha.

Māricanigraha and Ahalyāmokša.
 Preparations for Sītāpariņaya.

7. Return to Ayodhya.

- 8. Preparations for the Coronation.
- 9. Kaikeyi's complaint and obstruction.

10. Vanavāsayātra.

Plate ...

(1) MARKHANIGRAMA:

11. Death of Dasaratha.

12. Bharata in search of Rama.

Pādukāpatţābhişēka (damaged in four places).

Virāţavadha (3 places damaged).

15. Sürpaneka's Näsikächeda and Khara vadha.

 Complaint of Surpanaka to Ravana, and Marica coming to entice Sita.

17. Ravana carrying away Sîta, Jatayuvadha etc.

18. Sugrīvasakhya.

41. Rāma-Rāvaņa yuddha.

42.

43. Ravana's burial and Sīta's Agui pravēta.

44. Return to Ayodhya and Pattabhişeka.

45. Anantasayana.

The length of each panel is about 6' 10" and its breadth 10".

A few of them are 7' 10" in length. Unfortunately the figures have been varnished, and have therefore suffered in their elegance. Taking them as a whole, the carvings display great artistic skill. Each one of them has the expression of an inner informing voice, thus showing the masterly triumph of effort by the artists to capture the spirit of the great story which the carvings illustrate. As

works of art they are illustrative of the excellence of an ancient artistic tradition in Travancore. On seeing the panels one feels that there is a specially pleasing grace in the representation of womanly beauty in the figures, and also a certain amount of delicate manner and elegant smoothness combined with elevated and dignified composition. Many of the figures suggest an inexhaustible fertility of imagination and an acute feeling for form on the part of the artists-unknown craftsmen of versatile genius. The objects carved by them are charmingly simple; but they give utterance to a mysterious life of the soul, and probe the depths of our individual consciousness by their delicate characterization and life-like suggestiveness of composition combined with excellent decorative taste. These precious relics belong to Kellam 919 (i. e. A. D. 1744) in the reign of Rāja Mārtānda Varma, the maker of Modern Travancore.

Two other notable discoveries of the year in the field of ancient art relate to mural paintings, one on the walls of the Tiruvāmbādi shrine in the Srī Padmanābhasvāmi temple, Trivandrum, and the other in the Palace at Krsnapuram, the capital of an ancient principality in Central Travancore. The relics of mural paintings noticed in the former are considered to belong to the reign of the Travancore King Aditya Varma Sarvanganatha (14th century A. D.) who was a great patron of art and letters. The Sanskrit inscription engraved in the shrine records that King Sarvanganatha constructed at the town of Syamandura (Trivandrum) the shrire of Krapa, the gosala, a mandapa and a dipikagrha in the saka year 1296 corresponding to A. D. 1374-1375. These newly discovered relics comprise mostly figures of women, in different kinds of drapery, and wearing many varieties of jewellery. Their coiffeures are particularly graceful. One panel is particularly striking in its composition and charm of colour. It depicts a music-party of women playing on the Svarajit, the Gottu vadyam, the mukha Vina, the Vina, the Nagasvaram, etc. The figures are distributed in the given space with perfect balance, arrangement and grouping. One noteworthy feature about the scene is the absence of obtrusive sensation: there is a just proportion of well tempered harmony in which there is no thrilling note suggesting the possibility of discord.

The last of the mural paintings brought to light by the Department was in the Kṛṣṇapuram Palace, depicting the Purānic story of Gajēndramōkṣa. In execution, posture and composition, this is one of unsurpassed excellence and is a priceless piece of artistic work. There is about it, in addition, a sweet strange mystery of what beyond may lie and yet remain unseen. This mural is the largest in the State so far discovered, and covers a space of nearly

To face page 8.

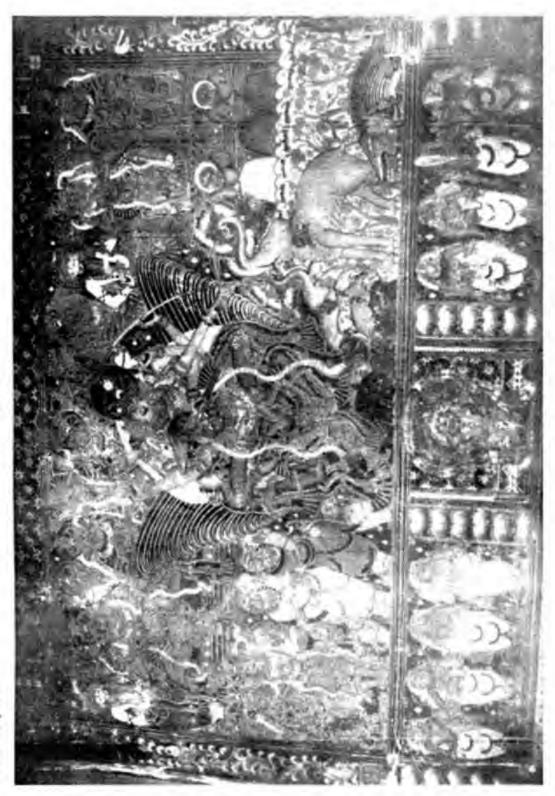

Plate 4.

RELICS OF MURAL PAINTING AT TIRUVAMPADI SHRINE, TRIVANDRUM.

154 sq. feet (14' horizontal, 11' vertical). Indging from its technique, the picture is presumed to belong to the early part of the 18th century A. D. and is probably the latest example of freeco painting done on a large scale, bringing humanity to art after a period of stiffness. One can see a wonderfully high quality of craftsmanship in the picture, illuminated with lovely colours, and also a magnificent and splendid composition. There are also a melody of line, and harmony of colour in it, coupled with a delicacy of form and design. One notices with surpassing effect a vigorous drawing of animal life in it conveying an expression of pathetic tenderness.

### Excavation.

An important aspect of archaeological work which was undertaken in the year relates to excavation. The existence of some it teresting magalithic monuments of the neolithic age was brought to my notice by Mr. A. Fullbrook Leggart in his estate at Tengakkal, nine miles from Vandiperivar on the High Ranges. Advantage was taken of his kind help and co-operation in the survey of these monuments and in excavating awo of their sites. On examination it was found that they were cairns containing underground stonecists made of granite slabs, or pre-historic burial chambers. Prehistoric burial graves such as stone circles, cairns, cromlechs, barrows, dolmens and distvaens are found in abundance on the High Ranges in Travancore. The erection of monuments for the memory of the dead forms one of the noteworthy elements of neolithic culture. (1) "The idea of the neolithic man was that the spirit of the dead should be given a location as in life, that the chamber of the dead should be a copy of the chamber of the living. The grave was to be the prototype of the home. The practice of constructing sepulchres for the dead came therefore into existence. The peolithic tombs or tumuli have been found beneath specially constructed cairns or earth mounds in various places. The earth slabs are sometimes long in shape in the earlier, and circular in the later periods. Sometimes, we find either in these barrows (literally hillocks) or quite separately from them single stones or menhirs (literally lofty stones) in comme noration of the dead. Sometimes we find a number of stones, generally three to four with one superimposed over the other to form a chamber for the dead, in which the tumuli are located. These are called dolmens, from celtic-dol meaning table and men-stone. Sometimes, we find huge circles of stones-crouslechs (literally stone circles) as they are called, enclosing dolmens and barrows, or standing by themselves. These stone monuments, menhirs, dolmens, cistynens and cromlechs, were constructed on

<sup>1.</sup> Page 111. Pre-Mussalman India V. Rangacharyar.

account of the primitive belief that unless the departed spirit had a home and other things as in life, it would have restless and trouble some around its old abode, doing harm thereby to the living."

In my excavation of the sites, I experienced in the first place considerable difficulty in getting the necessary clue to the sepulchra chambers. Secondly, the coolies had certain superstitious beliefs regarding grave-digging, and they could not be persuaded to undertake the work. Thirdly, they were inexperienced in archaeological excavation. Notwithstanding these obstacles, I was able to rexhume three cists as a result of a laborious process of excavation. In cist No. 1, the measurements of the cap stone were on the average 9' 6' length, 6' 10" breadth, 1' thickness, and the area excavated was 10" length, 8' breadth and 41' depth. Two burial urns were unearthed. one of which was 5' 13" in circumference at the mouth, 7' 1" in the middle, and 2' 10" in height. The smaller urn had a circumference of 3' 8" at the mouth, 5' 6" in the middle, and was 2' 6" in height. They were found side by side, with an intervening space of 1' 4". The thickness of the big um is 11/16", while that of the small one 1". The bigger nrn has all round it a ring chain with parallel symmetrical ends.

In the second cist, the cap stone measured 8' 10" in length, 6' in breadth and 10" in thickness. It was roughly tortoise shaped, and the area excavated was 10' in length 10' in width and 3\frac{1}{2}' in depth. Three small urns were discovered, but they were broken. Their top lids measured 1' 7" square and 2" thickness. The height

of these urns varied from 20 to 30 inches.

In the third cist, the cap stone measured 8' in length, 3\frac{1}{2}' in breadth and 3' 6" in thickness, and the area excavated was 8' length, 8' width and 3' depth. In this nothing except the chamber vaults was discovered.

The stone circle which enclosed these three cists, was 85' in circumference, and before excavation the dense vegetation of the place had to be cleared, and then the huge granite stone pieces removed. Roughly, an area of about 14 feet square had to be dug and the earth removed.

A more interesting pre-historic relic which was come across relates to two other cists in Mr. Leggatt's estate. In plan they are rectangular in shape, with four stone sides and a heavy cap stone. The measurements of cist No. 1 are 5' 4" length, 3' breadth and 4' 10" depth. The width at the bottom of the chamber is 3' 9" and length 6' 2". Cist No. 2 is double chambered, the length of the middle separating stone being 4' 10". The length of the end stone is 4' 6". The length of the side stones is 4' and that of the back stone 4' 10". The length of the front stone is 8' 9". The thickness of the slabs is 6" and the depth of the chamber is 5'. The

width of the first chamber at the top is 2' 7" and that of the second 2' 10", while their bottom width is 4' respectively One noteworthy feature of the chambers is the presence of a circular hole about 1' 2" in diameter on one of the side slabs, probably intended as a passage for the soul to return to earth after a long cycle of years. The presence of the circular hole on the solid side slab seems to show that the soul was expected to return at length to the tomb and probably to reenter its former body. Fergusson says that "these two, the holed stone and the cimolised cist, are perhaps the most direct evidence of similarity between the east and the west. But the whole system affords innumerable points of contact, not sufficiently distinct perhaps to quote as evidence individually, but collectively making up such a case that it seems very difficult to refuse to believe that both styles were the product of one kindred race of men, who, at the time they erected them, must have been more or less directly in communication with one another."

Trial diggings on another site at Vellimalai near Eraniel, about 40 miles from Trivandrum, brought to light the existence of 20 sepulchral urns. Two of them were unearthed, from one of which two iron axes were discovered. Their measurements are: Axe No. 1:— length 8.8", breadth at the broader end 3.4", breadth at the shorter end 2.1 7" and thickness 0.7". Axe No. 2:— length 5.5", breadth at the broader end 2.3", breadth at the shorter end 1.8" and thickness 0.3".

The pottery of these burial urns and of those discovered at Tengakkal Estate, Vandiperiyar, are not printed and have very little decoration. The larger urns have a chain-pattern or beadpattern drawing on the exterior, close to the mouth. The smaller pots found inside are of the thin slip variety. Two of the smaller pots inside were wide mouthed, with deep narrow bodies, and round bases. The relics unearthed from Veltimalai may be ascribed to the early iron age, and those exhumed from Vandiperiyar to the neolithic period. Being half-baked earthernware urns, they had become fragile on account of being buried in damp earth and had all got so broken or cracked that they could not be removed to the Museum.

India and the Deccan is the tumulus, the prototype of the Buddhist staps or tombs. These tumuli are circular mounds of earth surrounded by a ring of big boulders firmly planted in the ground to keep the tumulus in position and to mark the sacred spot. Occasionally there is an outer circle of stones around the curn enclosing the processional path and sacred precinct. The tumuli are unchambered. The former contain a large or small rectangula

chamber built of rough huge slabs of granite, arranged like the rides and ends of a box. A single slab forms the lid or roof. Sometimes the front slab of the tomb is a round bolt cut through the centre of the slab, or instead, the front is provided with a small stone-lived presage leading into the tomb, the entrance being closed with a stone slab securely fixed in the ground. The smaller chambers appear to be the graves of single persons, while the large chambers with openings in front represent family vaults, and as members of the family died, their cremat d remains were placed in urns which were passed through the openings which were promptly closed again. The unchambered tumuli have only a floor of stone slabs below the ground, or no floor at all. On these the remains of the dead, together with the usual offerings, were deposited and covered with earth. Then as a rule, two or three big heavy blocks of stone were placed on the top of the remains, presumably to prevent the spirits of the dead from returning to earth and causing trouble to the living." (1)

#### Conservation.

An aspect of archeological work which had not received due attention till recently is the conservation of acciont monuments. As a result of correspondence on the subject, Government were pleased to pass Regulation 1 of 1112 for the preservation of ancient monuments and of objects of archaeological, historical and artistic interest. The necessary rules for working the regulation have since been published. The usual maintenance of historical monuments, such as the ancients forts at Pallippuram, Kottoppuram, Padmanabhapuram. Udayagiri and Vattakotta, and also the tombs of DeLannov, of General Cullen, etc., was looked after by P. W. D. in consultation with me. Attention was concentrated in the year on the conservation of the ancient Palace at Padmanahhapuram, where a museum of antiquities is proposed to be started to house rolles of archeological, historical and artistic importance. A considerable impetus is proposed to be given to conservation as a part of archprological work in the State in future, and steps are being taken to declare protected under the Arcient Monuments Preservation Regulation the old temples, palaces and other relics having a historical, archaeological or artistic importance, in the hope that, after their protection they will be treated under the regulation with due regard to their proper maintenance.

At the Palace at Padmanāhhapuram over forty-five items of work necessary for its proper conservation were carried out in the year. Of these, the room containing the mural paintings received the greatest attention, where the necessary repairs to the ceiling

<sup>(1)</sup> Page 12. The Story of the Store A. H. Longburgt.

RESERVANTO OUP IS.

and to the floor were carefully attended to without any obliteration of their ancient charm. Secondly, the Navaratri Mandapa and the shrine in front of it were repaired and all the chunam from the sculptured pillars was removed. Thirdly, the mica panes of the windows of the palace were replaced by fresh ones. lacquered railings on the walls were restored. All the wood-work in the palace showing signs of decay was attended to. railings of the balcony under the clock tower, which had fallen away, were properly repaired and their gable supports strengthened. A police watch has also been arranged for the palace; and two fresh panels of mural paintings were copied in their original size and colour under my supervision. One of them relates to Krsna and the Gopis (4 ft. 2" x 3 ft. 8") and the other to the marriage of Siva and Parvati (4 ft. 1" × 3 ft. 2"). In the first Krana is represented as playing on his flute at Brndaban, divine and melodious tunes when all the Gopis flocked round him, leaving their homes in great numbers to hear the divine melodies of the flute, as to them, "heard melodies are sweet, but those unheard are sweeter." The Gopis are seen motionless, forgetting all the woes of worldly life, enjoying the heavenly music. The figure of Krana is depicted as Nilamegha Syamala, blue as the rainy clouds, with a emiling face, wrapped in his musical melodies. There is a Kirita on the head, ornamented with peacock feathers over the tied hairknot. There are also Hara, Angadha, Kataka, Anguliyaka, Udarabandha, Nupura and other ornaments on the figure, and the Yajnopavila goes down over the left shoulder. Krena is represented with red garments, with a Vanamala stretching from the neck down to the feet. The artist has indicated three bends (Tribhanga) in the body of Krena, whose right leg rests on the floor, while the left is seen going across in front of the right one. The Gopis are all represented with smiling lips, moved by the rapture of Krana's music and with an intense devotion combined with love and worship. Some of them are painted in red and others in blue, white and green. All of them hold Lilapadmas in their hands, and their hair is seen tied at the back and pinned with golden flowers set in with rubies and hanging Gurchas on the hair-knot. There is an abundance of floral design in the picture, and also a depiction of Makaras or fish whose movements are carefully indicated.

There are in this picture a restrained force and dignity, a clearness of drawing, a wealth of detail, and above all a deep and

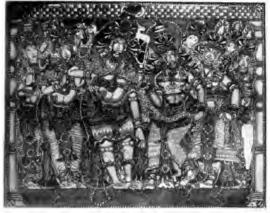

unsurpassed richness of colours, delicacy and sweetness.

The next panel depicts of the marriage of Siva and Parvati.

There are six main figures (three males and three females) in this picture, Siva, Brahma and Vispu, and Parvati, Srīdevī and Bhūdevī.

Two other male and female figures are seen at the back of the gods and goddesses, but only their heads are visible. Siva and Parvati are painted in coral-red colours, and both are in bridal attire. There is a coyness of expression emanating from the lovely and smiling face of Parvati. She holds a Varanamala and wears a Karanda Makuta with Prabhávali or Siraschakra. two ears have Ratnakundala. Pearls and rubies in different patterns adorn her neck. Various ornaments such as Udarabandha, Kucabandha, Keyara, Kankana. Valaya, Inguliyaka, Napura etc., are on her body. She is portrayed in Tribhanga pose, her right-leg resting on the floor while the left is raised somewhat. She wears a blue ornamental silk with hanging Gucchas. Two lady attendants, SrIdevi and Bhudevi, stand on her left side, the former painted in blue and holding in her right a golden plate or cup with fruits. Bhudevi is depicted in coral-red, and in her left hand is a Camara. Both figures are adorned with different kinds of jewellery. picture of Siva gives a heightened sense of the value of colour and form though it is etereotyped in pictorial convention. He has four arms, the back right holding a parasu and the front in Varadamudra. The back left arm holds a mrga or deer, while the front one is hanging down to the knee. On the figure of Siva is seen a Jatamakuja with Ganga and crescent moon. The right ear is adorned with Simha kundala while the left one has a Patrakundala. Garlands of Kapalas, rubies and paris, armlets, Udarabandhas, anklets, bracelets, finger and toe rings are also well depicted in the figure. The mark of Kalakata is shown in blue on Sivas's neck. Similarly Yajhopavita with Channavira is also seen on the shoulder. In his attire Siva has an ornamental white-grey garment. On the right side of Siva, Brahma with three faces and four arms, and Visnu with four arms are also painted. Both Brahma and Visnu are seen with folded hands in Anjali pose. The form of Siva in this posture is that of Kalyanamurti.

The colour of both these murals is lively and charming. The figures of the women are strikingly dignified in posture and charming in look. The simple energetic style of figure drawing which stands out in bold colours generally against a red background seems to be the element which produces the imposing result of the murals. Added to this there is a clear architectonic arrangement, rich and tasteful and lending a distinctness and rhythmic effect to the whole scene. The panels are splendid with colour, and their linear composition is full of details of extreme interest. The figures are drawn in simple out line and with antique dignity. A vibrant life of form, disintegrating expanses of colour, a pictorial cohesion and a sparkingly dazsling atmosphere of majestic simpli-

EARFAYL VARISAYA»

city are seen in the two panels vigorously executed with harmony of tone and masterly skill. The figures have all beautiful heads and they are in their irreprochable correctness not only rich but also serene. An air of deep spirituality, hallowed tranquility and peaceful calm makes the figures and scenes of the two paintings specially attractive, portraying, as they do, the typical expression of the essentially Hindu temper. Above all, the repose of the attitudes and the grouping of the various figures give a great solemnity to each scene. One gets on the whole, the impression of a gorgrous achievement of a series of sublimated still lives or statuesque ribylline figures. The faces of all these however have an expression of grave and dignified composure: and every figure stands out against a background set in some architectural design. The scale of colours is made richer and more manifold by the introduction of outline drawings, form, and drapery being strongly defined and filled in with colours whose distribution is directed by a general law of harmony and composition, resulting in a crysallic state of stiff formality.

### Publications.

The index to volume 7, Parts 1 and 2, of the Travancore Archaeological Series was prepared in the year and sent for printing to the Government Press. A note on Travancore temples was also got ready under directions of the Dewan for Mr. Mahadeva Desai. It was accepted by the Railway Publicity Officer with the Government of India, and has been published in the Indian State Railways Magazine. An invitation having been received on behalf of the India Society from Sir John Cumming to contribute an article on Travancore Archaeology to the proposed publication of the Society "Revealing India's Past," the same was accepted, and the article prepared and sent. Lastly, a short "visitor's guide" to the Government museum was printed and copies of the same are available for sale.

# The Museum and Sri Chitralayam,

These two institutions continued to be under my charge throughout the year, and not an inconsiderable part of my time was taken up with their administration and in the exhibition and display of their contents. The reports of these institutions are published separately.

The following is a statement of Receipts and Expenditure of the Department in the year:-

Receipt s.			
27.5	Rs.	Ch.	Cash.
Sale of unserviceable articles	1	0	8
Sale of Photos	13	20	12
Sale of Elements of Hindu Icono-
